initial state

fetch, decode,
and step

trace artifact
states and bindings

independent replay
and controls

recompute

```
graph LR; A[program bytes  
initial state] --> B[fetch, decode,  
and step]; B --> C[trace artifact  
states and bindings]; C --> D[independent replay  
and controls]; D -.->|recompute| A;
```

The diagram illustrates a four-stage process flow. The first three stages are contained in light blue boxes with dark blue borders, while the final stage is in a light orange box with a dark orange border. Solid black arrows connect the stages in sequence. A dashed teal arrow labeled 'recompute' originates from the bottom of the final stage and points back to the bottom of the first stage, indicating a feedback loop.
